

## CLAIMS

What I claim is new and desire to be protected by patent is as follows:

By combining a simple door "wedge" or "chock" with a battery operated high powered strobe the invention provides:

- a) Means for providing a door holding device that will prevent a building door from closing;
- b) Means for providing a flashing strobe to provide a visual cue as to the location and distance of said door;
- c) Means of activating the strobe by simply inserting or "wedging" the invention under a door in a building;
- d) Means of deactivating the strobe by simply removing the invention from under the door.
